The M.S. in Health Education provides students with the skills and training necessary to promote, maintain, and improve health in schools and in the community. Through a multidisciplinary curriculum and expert faculty, students gain a broad understanding of the complex emotional, intellectual, physical, spiritual and social components of human health.

What will you learn?

Students are trained to acknowledge the value of diversity in society and to embrace a cross-cultural approach as they assist individuals in making positive health-related social and behavioral changes. Focus is on community assessment, program planning and implementation, and health services research, among other areas. A capstone research project is required and optional fieldwork opportunities are available.
What will you do with a master's in health education?

With national policy emphasizing health promotion and disease prevention, health education is a thriving field. Graduates assume positions of leadership and service as professional health educators in a variety of practice, research and policy-making settings. Students will truly effect change in the world with this meaningful education and career path.

Next steps

- Join us for a graduate studies open house. You’ll find details about upcoming events at [sju.edu/gradvisit](http://sju.edu/gradvisit).
- Apply online at [sju.edu/gradapply](http://sju.edu/gradapply).
- Connect with us! Have a question or want to talk about your professional goals? We’re happy to help.

“SJU took a unique approach in isolating health education and recognizing it for the individual field of study and profession that it is. I have gained and strengthened skills in the areas of project management, time management, program development and administration, community engagement, grant writing, building community partnerships, and most importantly, networking.” – Anjelica De Sanders ’13
